3)To create a chart of sum of profit by year, month and year.

•Take a stacked column chart.

•For x-axis pass date (year, month).

•y-axis pass sum of profit.

•For legend pass year.

4)Slicers:

•Slicers are working like a filter but the slicer is not for the developers it is for the users.

•We can create slicer for numerical, categorical even date. But most of the slicers are created for categorical data.

a) Country

•For field pass country.

•This chart is representing overall year and month wise profit. Combining 2013,2014 of profit of all the countries.

• Go to format your visuals and change slicer settings

Options available are:

1)style

2)selection

• Change style and selection.

•In slicer settings go to style and choose vertical list.

•For selection choose "Select all".
